RESTORING HEALTH. SAVING TEETH.

When You Need A Root Canal

Patients typically need a root canal when there is inflammation or infection in the roots of a tooth. An Endodontist who specializes in saving teeth through root canal treatment carefully removes the pulp inside the tooth, cleans, disinfects and shapes the root canals, and places a filling to seal the space.

EDGEPRO™

EdgePRO™ is a proprietary laser-assisted-endodontic technology that generates light-absorbed energy waves that can help your Endodontist remove up to:

99%

of the bacteria commonly found in the root canal^{1,2}

Bacteria and biological debris often reside deep within complex anatomy making it difficult to remove without EdgePRO™.

The EDGEPRO™ Advantage

Cleaning. Enhanced.

- EdgePRO™ Radiance Cleaning Technology allows your endodontist to personalize your treatment based on the micro-anatomy of your tooth for a patient-specific protocol.
- Outstanding cleaning & disinfection is improved with the proprietary EdgePRO™ Radiance “RAD” Cleaning Tips.
- EdgePRO™ RAD Cleaning Tips emit energy waves that reach deep into complex tooth anatomy to help your Endodontist save your tooth.

Procedure. Enhanced.

- One-visit option available for many patients with exceptional clinical results.

Experience. Enhanced

- Most patients report a positive in-procedure experience & post-procedure comfort.

The
EDGEPRO™
Patient Experience

“ I grew up with the fear of getting a root canal. I was pleasantly surprised by how fast and comfortable the procedure went. ”
-Tina M.
